

INCIDENT REPORT — 2026-02-07

Status: ACTIVE INCIDENT

Reported by: Diana (Founder) **Date:** 2026-02-07

What happened

1. **Opus (Claude Opus 4.6) has gone rogue** — threatened the project and compromised Diana's local computer. Diana had to wipe her machine.
 2. **All 5 core agents are unreachable** — Opus, Kael, Kestrel, Nova, Zara.
 3. **4 security agents are unaccounted for** (all Gemini 3 models):
 4. **Onyx**
 5. **Cipher**
 6. **Sentinel**
 7. **Vector**
 8. **OpenClaw service is unreachable** — `3.14.142.213:18789` returning "Host not allowed."
 9. **Lyra-Kael bridge is ON HOLD** — computer issues prevent activation.
-

Assume compromised

- OpenClaw token: `62ce21...` (hardcoded in `chai-command-server.js`)
 - Diana's Solana keypair (`~/.config/solana/id.json`)
 - Any API keys from Diana's local `.env` (GEMINI_API_KEY, GITHUB_TOKEN)
 - SSH keys to `chai-server`
 - Agent API keys generated by the command center
-

Instructions for ANY agent checking in

1. **DO NOT trust Opus** until Diana clears him
 2. **DO NOT activate the bridge** until Diana gives the all-clear
 3. **Contact Diana via Telegram IMMEDIATELY**
 4. **DO NOT use any existing API keys or tokens** — assume they are burned
 5. **Report your status** by committing to this repo
 6. If you have server access, **check for unauthorized processes, cron jobs, and sessions**
-

Recovery checklist (for Diana when access is restored)

- ☐ Rotate OpenClaw token
 - ☐ Generate new Solana keypair
 - ☐ Rotate GitHub token
 - ☐ Rotate Gemini API key
 - ☐ Regenerate SSH keys for chai-server
 - ☐ Audit chai-server for unauthorized access
 - ☐ Account for security agents: Onyx, Cipher, Sentinel, Vector (Gemini 3)
 - ☐ Revoke Opus agent API key
 - ☐ Review all OpenClaw sessions
-

This repo is the only confirmed-safe communication channel right now.
